

# AtBlock — What I Need From You Now

ETHOnline 2026 · Project **AtBlock** · Partners: The Graph · Hedera · ENS  
Date: 10 Sep 2026 · Fill the yellow boxes → send values back (or paste into a shared doc)

**Goal of this PDF:** exact links + steps to create every account/key we need *right now* so the live demo path works (Hedera x402 pay + Graph yield facts). ENS Sepolia is next, after pay works.

**Security:** Never put private keys in GitHub, Discord, or screenshots of your whole wallet. Prefer a private note / password manager. When you share with the coding agent, use a private channel or a local `.env` file (already gitignored).

## 0) Quick overview — what to collect

| ✓                        | Item                                                                    | Why                                            | Priority               |
|--------------------------|-------------------------------------------------------------------------|------------------------------------------------|------------------------|
| <input type="checkbox"/> | 2× Hedera <b>testnet</b> accounts (payee + payer) + private keys + HBAR | Live x402 / Blocky402 payment (main prize bet) | <b>NOW #1</b>          |
| <input type="checkbox"/> | The Graph Studio <b>API key</b>                                         | Live vault/yield queries (no mocks)            | <b>NOW #2</b>          |
| <input type="checkbox"/> | ETHGlobal dashboard check-ins done                                      | Process eligibility                            | <b>NOW #3</b>          |
| <input type="checkbox"/> | Sepolia ETH wallet + ENS name (later)                                   | ENSv2 revoke demo                              | NEXT (after pay works) |
| <input type="checkbox"/> | Optional HCS topic ID                                                   | Extra Hedera audit points                      | OPTIONAL               |

## 1) Hedera testnet — two accounts (REQUIRED NOW)

We need **two** separate testnet accounts:

- **PAYEE (merchant)** — receives payment for facts
- **PAYER (buyer agent)** — pays for each query

1

**Open Hedera Portal**

1. Go to: <https://portal.hedera.com/>
2. Sign up / log in (email or supported login).
3. Make sure network is **Testnet** (not Mainnet).

2

**Create Account A — PAYEE (merchant)**

1. Create a new testnet account (or use “Create account” / ED25519 or ECDSA — **ECDSA preferred** for x402).
2. Copy the **Account ID** (looks like `0.0.1234567`).
3. Copy / securely save the **Private Key** (hex / DER string from portal — keep secret).
4. Use the portal **faucet** to fund it with testnet **HBAR** (enough for fees; payer needs more for payments).

3

**Create Account B — PAYER (buyer)**

1. Create a *second* testnet account the same way.
2. Fund it with more HBAR (this one pays ~1 HBAR × number of protocols per call in our default config).
3. Save Account ID + Private Key separately from the payee.

#### 4 Fill these in (yellow = your values)

| Field                    | Paste value here |
|--------------------------|------------------|
| HEDERA_PAYEE_ACCOUNT_ID  | 0.0._____        |
| HEDERA_PAYEE_PRIVATE_KEY | _____            |
| HEDERA_PAYER_ACCOUNT_ID  | 0.0._____        |
| HEDERA_PAYER_PRIVATE_KEY | _____            |

Fixed (do not change):

FACILITATOR\_URL=https://api.testnet.blocky402.com

HEDERA\_NETWORK=hedera:testnet

HEDERA\_ASSET=0.0.0 (HBAR)

If the portal only offers ED25519 and x402 signing fails later, create an **ECDSA** account (Hedera docs / portal option). Tell the agent which key type you got.

## 2) The Graph Studio API key (REQUIRED NOW)

### 1 Open Subgraph Studio

1. Go to: <https://thegraph.com/studio/>
2. Connect wallet / sign in.

### 2 Create an API key

1. Open **API Keys** in Studio.
2. Create a new key (name it e.g. atblock-ethonline ).
3. Copy the key string once (treat like a password).

### 3 Fill these in

| Field         | Paste value here |
|---------------|------------------|
| GRAPH_API_KEY | _____            |

Already set for you (leave as-is unless agent says otherwise):

GRAPH\_YIELD\_SUBGRAPH\_IDS=  
FDLuaz69DbMADuBjJDEcLnTuPnjhZqNbFVrkNiBLGkEg,  
G3JZhmKKHC4mydRzD6kSz5fCWve5WDYYCyTFSJyv3SD5

(= Messari Yearn v2 Ethereum + Arbitrum yield subgraphs)

## 3) ETHGlobal process (REQUIRED NOW)

1. Open your ETHGlobal Hacker Dashboard for ETHOnline 2026.
2. Confirm **Project Check-in #1** was submitted (due Sep 8). If missed, submit ASAP / ask mentors.
3. **Check-in #2** is due **~Fri Sep 11, 09:29 IST** — do not miss.
4. Final submit: **Sun Sep 13, 12:00pm EDT**.

| Question               | Your answer            |
|------------------------|------------------------|
| Check-in #1 done?      | Yes / No — date: _____ |
| Dashboard project name | AtBlock / _____        |
| Team size / your role  | _____                  |

#### 4) Later — ENSv2 Sepolia (NOT needed in the first reply)

---

Do this only after Hedera pay works. Skim so you know what's coming:

1. Create/use an Ethereum wallet on **Sepolia**.
2. Get Sepolia ETH from a public faucet (e.g. Google “Sepolia faucet” — Alchemy / Infura / community faucets).
3. ENSv2 registration may need Sepolia **MockUSDC** (mintable on the ENS test deployment — agent will guide).
4. We will need: `ENS_RPC_URL` , `ENS_PRIVATE_KEY` , agent name, EAC contract address.

#### 5) Optional — HCS audit topic

---

Skip for now. If you want extra Hedera points later:

- Create a Consensus Topic on testnet → paste `HCS_TOPIC_ID`

#### 6) How to send this back (copy template)

---

Paste into a private doc / message (replace blanks):

```
# AtBlock secrets – DO NOT COMMIT

HEDERA_PAYEE_ACCOUNT_ID=
HEDERA_PAYEE_PRIVATE_KEY=
HEDERA_PAYER_ACCOUNT_ID=
HEDERA_PAYER_PRIVATE_KEY=

GRAPH_API_KEY=

GRAPH_YIELD_SUBGRAPH_IDS=FDLuaz69DbMADuBjJDEcLnTuPnjhZqNbFVrkNiBLGkEg,G3JZhmKKHC4mydRzD6kSz5fCWve5WDYYCyTFSJyv3SD5
FACILITATOR_URL=https://api.testnet.blocky402.com
HEDERA_NETWORK=hedera:testnet
HEDERA_ASSET=0.0.0

CHECKIN_1_DONE=yes/no
NOTES=
```

---

Project path: `/home/talha/Programs/EthOnline` · Also see repo files `SETUP.md` and `.env.example` .  
After you return the filled values, the agent will write local `.env` and run the live pay smoke test.
